Outsoles

LOWA Rubber
Outsole

The LOWA RUBBER OUTSOLE is a LOWA-conceived component whose tread design is made from an optimised rubber mixture and was created with the challenges of real-world use in mind. The strengths of a rubber outsole are reflected in the excellent traction that it provides on all sorts of different terrains.

Midsoles

Fit Frame

In this construction style, the sole is designed as a type of shell that forms a perfect home for the foot. The result is guaranteed comfort.

DynaPU®

The midsole is the heart of rolling properties and shoe cushioning. It is usually made from a foamed plastic. LOWA has exclusively developed a special polyurethane (PU) foam material that meets all cushioning, comfort and durability criteria: LOWA DynaPU®. The special feature: The material is extremely stable. It retains its stability and substance even when it is pressed together 1,000 times. As a result, the finished shoes will maintain their optimal cushioning ability even after you have walked many kilometres in them.

Materials

Textile Lining

The textile lining offers both lightness and durability due to the low amount of material abrasion. It is easy to care for, comfortable and creates a very pleasant foot climate thanks to its exceptional breathability qualities.
